From unpacking to putting in 15 minutes.

It's as easy as one . . . two . . . three. If you can handle a screwdriver, then you can assemble a Huxley Modular Putting Green.

The patented modular design makes assembly a snap. Simply slide the base panels together, then insert and tighten the retaining screws. The special interlocking teeth ensure correct panel alignment while the patented floating hole cups guarantee spot-on playability with every putt. Finally, roll out the ready-cut turf, insert the pin markers and you're ready to play.

Just 15 minutes a day spent putting on your Huxley Modular Green will help you develop a more dependable stroke, build confidence and, most important of all, improve your score.

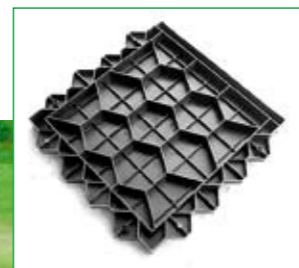

If you want a professional quality putting green that gives a consistently true and even roll, no matter what the temperature or weather conditions, then you won't do better than a Huxley.

Patented technology. Professional results.

Huxley Modular Putting Greens are extremely durable, weather-resistant, UV stable and colour safe. The honeycomb grid construction of the base panels provides tremendous strength, yet each panel weighs an average of just 7lbs (3kg), making them both easy to handle and to store.

The patented design allows the individual panels to flex to compensate for uneven surfaces - ideal if you want to set up a Huxley Modular Putting Green on turf or a composite surface outside.

Most important of all, you can be certain that your Huxley Modular Putting Green will consistently deliver the feel and roll of a real golf green, so when you practise on a Huxley surface, you'll reap the benefits next time you're out on the golf course.

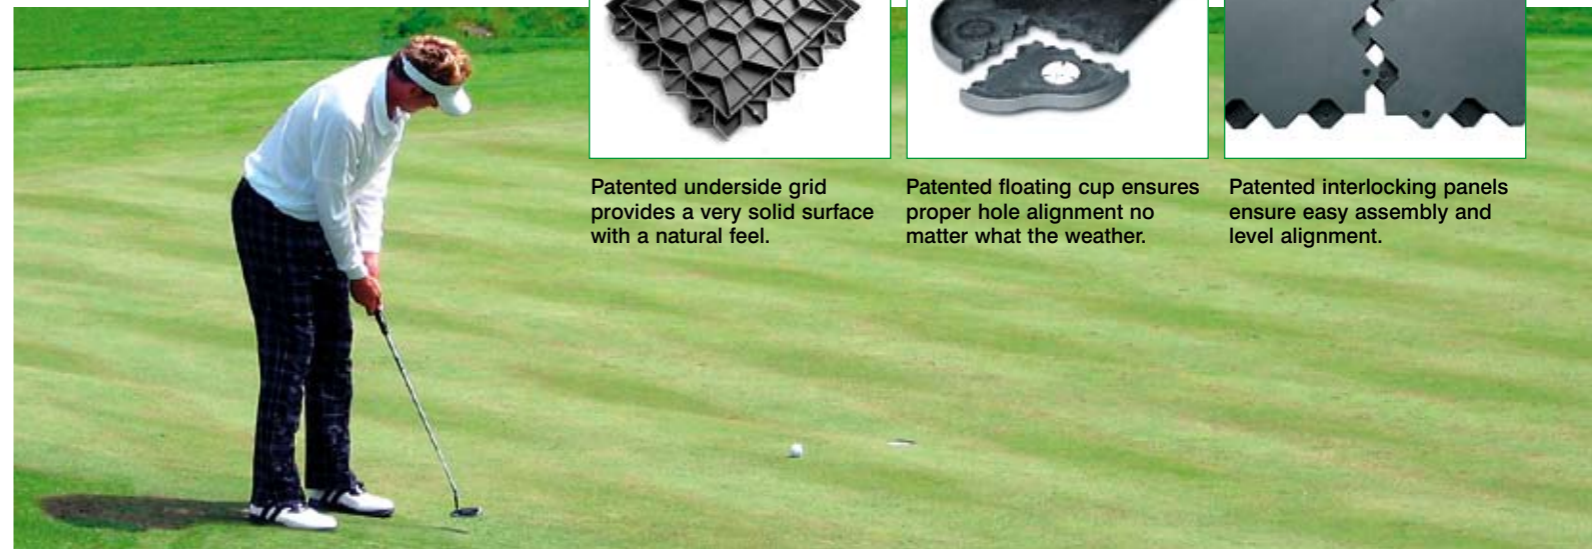

Patented underside grid provides a very solid surface with a natural feel.

Patented floating cup ensures proper hole alignment no matter what the weather.

Patented interlocking panels ensure easy assembly and level alignment.

Suitable for use indoors or out.

You can assemble one of our Modular Greens and leave it permanently in place or move it easily from one location to another. Huxley Modular Greens are suitable for laying out above the surface or, for a more permanent installation, inset within the ground. All you need is a putter and a few golf balls and your modular green is ready for play whenever you are.

Whichever style or layout you choose, indoors or outside, Huxley Golf makes it really simple for you to practise whenever you want, at a price you can afford.

Set up quickly and easily indoors or outside, Huxley Modular Greens are ideal for charity and fund-raising events (above left), for corporate days and social occasions (above centre) and for coaching and practice purposes at golf clubs and academies (above right). This picture shows Alison Nicholas, European Solheim Cup Captain for 2009, providing tuition at The Alison Nicholas Golf Academy with the help of a Huxley Training Aid. Huxley Golf is able to design and supply Modular Greens also in bespoke shapes and sizes to fit spaces from as little as 20 sq ft (2 sq m) upwards. Simply let us know your requirements and we'll produce a design to suit.

Questions & Answers

Q: Will a Huxley Modular Putting Green improve my golf game?

A: As with all competitive sports, regular practice is the key to success. Owning one of our modular greens provides you with the opportunity to practise regularly in private on a professional quality surface, without distractions. There is little doubt that you will see positive results in a very short time.

Q: Can you supply a Modular Green to suit my budget?

A: The innovative design and easy assembly of the range of Modular Greens available from Huxley Golf has resulted in very attractive prices. If you can afford a new driver, then there is no reason why you cannot have your very own putting green.

Q: Could I practise my putting on my Huxley Modular Green in my garage?

A: Yes, great idea! Your putting should certainly improve rapidly because you will be able to practise all-year-round irrespective of the weather or the time of day. When not in use, either of the two Training Aids can be moved easily out of the way and leaned against the garage wall until next time.

Q: Can I leave my Modular Green outside?

A: Certainly! The material used for the base panels and for the putting surface is designed to withstand sun, rain, wind and snow. However, if prolonged wet or severely cold weather is forecast, we recommend that you roll up the turf and take it inside until conditions improve.

Q: How easy to assemble are your Modular Greens?

A: Very easy! If you can slide a few panels into place and handle a Phillips-headed screwdriver, then you will be able to assemble most Huxley Modular Putting Greens in 15 minutes or less. Obviously, the larger the area, the more screws you will have to insert and tighten, but it is still a very speedy operation.

Q: Once I have put together a new Modular Green, can it be moved easily to another location?

A: With enough helpers around the perimeter, you may be able to lift and move one of our smaller putting greens intact without having to dismantle it. Otherwise, all you have to do is take it apart and put it back together in the new location of your choice. It shouldn't take more than half an hour, even with one of our largest greens.

Q: How do I go about installing a Huxley Modular Green in my garden?

A: If the installation is temporary, simply assemble the green on any firm, stable surface. It does not have to be dead level because the panels of the Huxley

Modular Green are designed to flex and follow gentle undulations. Slight undulations or a slight fall are ideal because they provide interesting breaks while also assisting drainage. When placing your modular green on a lawn, closely mow the area first to provide a stable base for the green to rest on. Remember that the grass will turn yellow and eventually die if the green is left in one place for too long.

For permanent in-ground installations, you may need to take a little more trouble to provide a firm and stable base while ensuring also that there is some fall for drainage. If the ground is not ideal, you may need to improve levels and/or stabilise the area before smoothing and compacting it to make a suitable base for your modular green. Huxley Golf and its appointed dealers will be happy to provide further advice on in-ground installation.

Q: Can I have contours on the surface of the green?

A: Yes. By inserting beneath the turf one or more of the foam contour pads supplied with each Modular Green, you can create an infinite number of breaks which can be easily altered. Extra contour pads are available to order.

Q: I notice that the hole cups are able to move laterally a little. Why is this?

A: The cups are designed to move to allow for expansion and contraction of the base panels and the turf surface in hot and cold weather conditions. This ensures perfect cup alignment and a consistent ball roll to the pin.

Q: Can I enlarge or change the shape of the green once I have purchased a specific model from your range?

A: All of our Modular Putting Greens, apart from the two Training Aids, are suitable for enlargement and alteration in shape at a later date. You will need to purchase additional base panels of the correct type and shape and a piece of purpose-cut turf to fit the proposed new shape. Huxley Golf will be happy to assist you create a new design and provide advice on base panel selection. Please contact us for further information.

Q: How fast is the turf?

A: Our putting turf is designed to replicate tournament green speeds.

Q: Where can I try a Huxley Modular Putting Green?

A: Huxley Golf has a network of officially-appointed dealers in the UK and Ireland, continental Europe and further afield, all of whom have available a demonstration Modular Green for assessment purposes. Please contact us for further information.

For fun, relaxation or serious practice . . . ask for a Huxley.
